

DISASTER ALERT

D!saster
Alert

By: Niraj Gupta

OVERVIEW

- **App Name:** Disaster Alert
- **App Description:** This app helps people to check nearby disaster and alerts them to not go by that area by providing the exact location. The app gathers disaster information by local people of particular disaster area.
- **Track:** Adult Individual
- **Category:** Climate & sustainability

THEME

In 100 words or less, describe the problem that you chose to address, and why you were interested in solving it. Please note that this portion of your submission will be published if you are selected as a finalist or winner.

Nepal is one of the most disaster-prone countries. Every year, due to landslides and floods, the roadways get blocked and take a minimum of one day to repair. As a result, lots of people get stuck in huge traffic. If people know about the disaster before starting their journey, they can choose an alternative route that will save both lives and time.

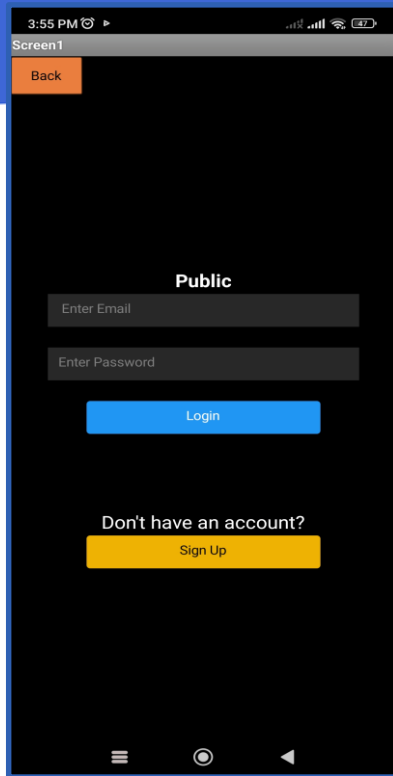

Also, Nepal doesn't have a proper monitoring system for disasters. To address the issue, local people in the particular disaster-prone area can act effectively to provide them with information through the app, which will again save money and time.

INSTRUCTIONS

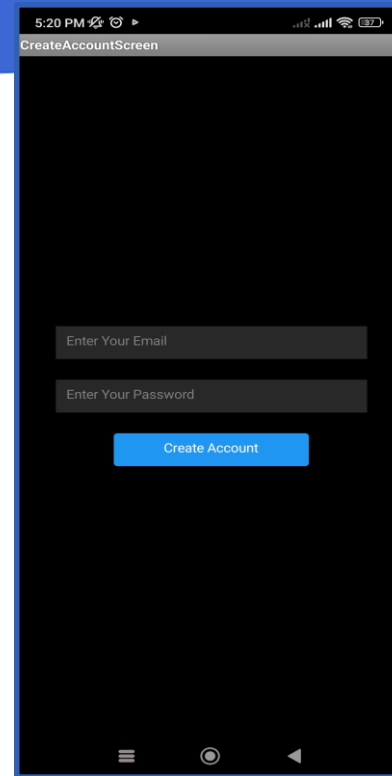

Step 1: choose button according to who the user is

Step 2: fill in the details with email and password and if no account then click on sign up

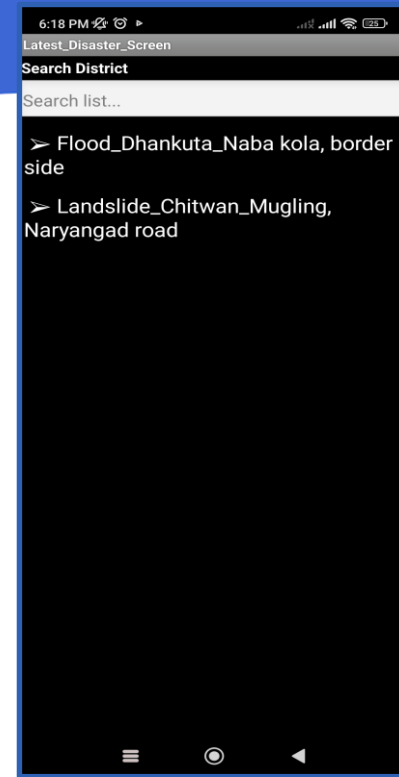

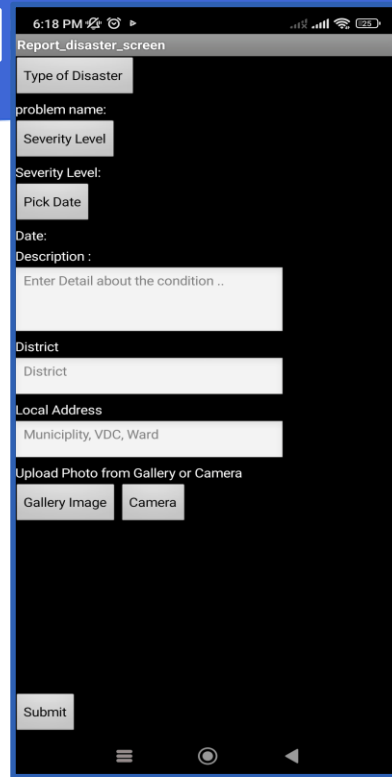

Only when user clicks sign up btn
→

Step 3: enter email and new password, then account is created. Check email for verification link

FUNCTIONS

Step 8: When 'Solved Disaster' button is pressed, this screen opens with list of solved disaster

When list item is selected

Step 9: Shows the detail of solved disaster, with solved photo.

Note: Only 'Government User' can delete and upload photo of the solved disaster. Users can view location through google map by clicking on 'View Location' button

LIMITATIONS

In 100 words or less, describe the limitations of your app and what people should carefully consider when using it.

All the textboxes should be filled, as there is no authentication to check if a textbox is filled or not. Public users should only log in through the public button, and government users should log in through the government button. All registered account users should remember their passwords, as there is no reset password option. After registering the email, the email should be verified through the link sent to the given email address. The data list in Firebase for 'Solved Disaster', should be deleted manually by the admin of the app.

APPENDIX

If you have any supplementary information you wish to include, feel free to add it to the Appendix. This section is entirely optional.

It is recommended to add materials to the Appendix if you submitted a hardware project (e.g. with schematics, flow diagrams) or if your project included significant programming components outside of the MIT App Inventor platform.

Please be aware that judges reserve the right to exercise their discretion in reviewing materials within the Appendix, and they may not review its entirety if they consider it excessively lengthy.
